

Made for the trade

REACH Policy

Under the REACH directive Hexavalent Chromium (CrVI) is listed as an SVHC and deemed carcinogenic when inhaled or ingested if the concentration is more than 0.1% w/w. We have worked closely within our supply chain to ensure the fixings and fasteners we supply comply with the aforementioned directive in order to ensure ourselves, our customers and the user can continue to supply and use our products with peace of mind and more importantly with no risk. By working with our suppliers plating factories we have managed to ensure the levels of CrVI are compliant. We have also had our products independently tested with SGS laboratories to endorse our factories results.

RoHS/WEEE Policy

In order to comply with the restrictions of hazardous substances outlined in the RoHS directive relating to electrical and electronic equipment and the waste electrical and electronic equipment (WEEE) we ensure the relevant TIMCO products are plated with Trivalent Chromium (CrIII).

Should you require any further information or would like to discuss in more detail please do not hesitate to contact us.
